

BROWER®—YOUR COMPLETE EQUIPMENT SOURCE TO PROTECT, WATER AND FEED PASTURED POULTRY

PVC PASTURED POULTRY PEN

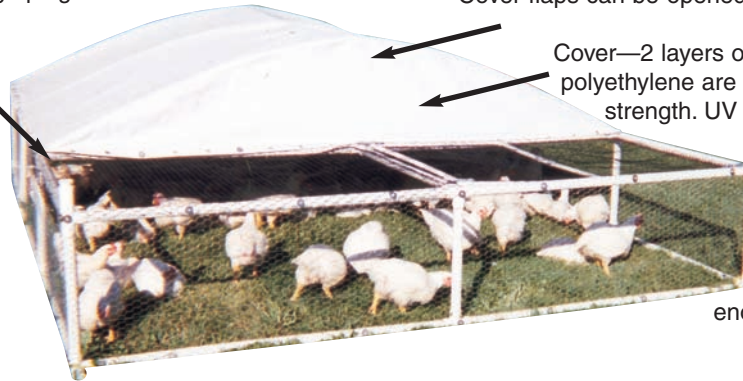

Up to 90 Birds Rest Easily, Move Freely and Stay in a Comfortable Environment

Water ballast easily added through plug for wind resistance.

Cover flaps can be opened for venting on hot days.

PPP10x12x3

Pens shippable via UPS.
 Assembly required. You will need PVC cleaner and glue.

Cover—2 layers of 10 ounce, high density polyethylene are overlapped for superior strength. UV inhibitors added.

PVC is high impact, UV inhibited. Rigid enough to support necessary equipment yet flexible enough to fit ground contours.

LOW PROFILE BELL DRINKER

Height is easily adjusted as your birds grow.

- This is a low pressure drinker. Use a bucket or a low pressure water line to fill for water supply.
- Sand ballasting keeps drinker hanging level.
- Depth of water in trough can be adjusted.
- Suspend bell drinker from your PVC pen. Raise as birds grow.
- Sufficient for 100 broilers or 1 pen of pastured birds (1 broiler, depending on its size and the weather, will drink up to 2 cups per day).

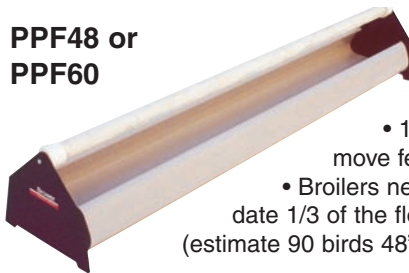

CM500

TROUGH FEEDERS

Trough Feeders with more capacity than these don't exist.

PPF48 or PPF60

- UV inhibited materials.
- 5" (12.7 cm) wide top tapers out to a 7" (17.8 cm) width at the bottom (feed saver lip is incorporated into trough design).
- 48" (121.9 cm) and 60" (152.4 cm) long models.
- 1" (2.54 cm) PVC reel keeps birds from roosting; also can be used to lift and move feeder.
- Broilers need about 3" (7.6 cm) trough space per bird with enough feeders to accommodate 1/3 of the flock at a time (estimate 90 birds 48", 120 birds 60").
